ENVIRONMENTAL PROTECTION AND DIGITIZATION

WE ARE THE CHALLENGE

Climate change has become noticeable and tangible. Everyone is more than ever asked to contribute to the climate and the environmental protection. Companies from all industries are repeatedly confronted with the challenge, to reconciling their economic and environmental goals – not an easy task, but a very important one at the same time!

As a responsible company, we want to face this challenge...

AFTER CERTIFICATION IS BEFORE CERTIFICATION

Already at the beginning of the year, with the successful certification according to ISO 9001 and ISO 14001, we were able to demonstrate that our company is built on well-functioning structures and that economic growth into account the environment can work well. Despite the successful certification, it is important for us to remain agile and to continue to search for intelligent and sustainable solutions in order to meet the needs of the environment and our employees in the future.

FOR OUR EMPLOYEES AND THE ENVIRONMENT

By integrating tablets and software tailored to our business, we are now able to retrieve real-time data directly at the workplace. Digitization allows work plans, drawings and instructions to be changed quickly and easily, increasing flexibility and reducing turnaround times in manufacturing. Due to the intelligent flow of information, the use of paper in our manufacturing processes has been reduced by more than 98%!

- ✓ Improvement of environmental
- ✓ Increasing flexibility / real-time data
- ✓ Increase in performance
- ✓ Key figure determinations for further optimizations
- ✓ High adherence to deadlines
